Actionable Endpoint Intelligence

Promisec Endpoint Manager

Restoring Integrity across Infrastructure, Applications and Users

Promisec Endpoint Manager is the first and only agentless solution that delivers 100 percent visibility and remediation capabilities across all endpoints, while at the same time extending the value of your current information security investments. Promisec Endpoint Manager leverages patented, agentless technology to quickly and remotely inspect your entire endpoint environment to uncover, analyze, and remediate abnormalities that lead to failed audits and faulty business intelligence. The solution is engineered to run anytime on every enterprise network with minimal performance impact.

The Modern Threat Landscape Demands a New Type of Security Solution

Today's threat landscape is more dynamic and sophisticated than ever before—and traditional security solutions simply have not kept up. What's missing? Put simply, a way to confirm—on a continuous basis—that all information security products are functioning properly and that all processes and standards are being adhered to. Restoring compliance and integrity across all IT systems and endpoints calls for an entirely new type of security solution.

Designed to meet the increasingly complex endpoint security needs of large global enterprises, Promisec Endpoint Manager provides complete visibility into endpoint status throughout the enterprise; compares current status with security and network policies to assess gaps in alignment; and enables manual or automatic remediation and reporting. The result is integrity across infrastructure, applications, users and the cyber environment:

- **Infrastructure Integrity**: confirm that all endpoints are properly configured and all agent-based AV, DLP, patch management, encryption and firewall solutions are operational
- **Application Integrity**: confirm that all patches are deployed and all unauthorized applications are identified and removed
- **User Integrity**: confirm that all users are compliant with corporate policies and standards
- **Cyber Integrity**: confirm that all cyber threats are quickly identified, analyzed and remediated

Come See What We See

Promisec Endpoint Manager is simple, easy to use, quick to implement, and adaptable to unique environments. Our agentless technology and intuitive interface can be used to create tailored inspections to meet the specific needs of multiple departments within an organization, which allows for multiple simultaneous revenue streams for realizing ROI.

- **Efficient remediation for increased productivity**: Easy right-click (manual) or automatic remote remediation with no PC downtime, letting you remotely re-enable disabled antivirus clients, repair and maintain registry settings, and uninstall unauthorized applications.
- **Agentless architecture with minimal network impact**: A single Sentry monitors all managed network endpoints in minutes, generating alerts for any policy deviations or unauthorized activities without overloading the network or the endpoint devices being inspected.
- **Rapid deployment with less overhead**: Deploys in minutes while avoiding costly testing and configuration changes normally needed to ensure that auxiliary network software is still functioning properly.
- **Unprecedented network control, optimization and performance**: 24/7 agentless control of your endpoints that complements and optimizes your existing security and IT controls to ensure that antivirus and patch management applications are working properly across all endpoints; encryption agents are installed and running in the correct places; and group policy (GPO) definitions are aligned to corporate expectations.
