

Promisec Integrity with Endpoint Healthcheck

Ensuring endpoint health through cloud-based cyber detection

Promisec Integrity is the first solution of its kind, providing enterprises with an affordable, customizable solution to ensure compliance and integrity across the entire endpoint environment. The cloud solution offers customers the same nimble, agentless functionality as our on-premise offering, Promisec Endpoint Manager, but through a browser interface to enable antivirus validation, unauthorized software discovery, Microsoft Windows OS and patch validation, and endpoint vulnerability detection.

Critical Endpoint Health Detection through Promisec's Secure, Multitenant Cloud

Designed to meet the unique needs of small-to-medium enterprise environments, Promisec Integrity leverages the flexibility and scalability of the cloud to offer advanced detection of endpoints at risk. With Promisec Integrity with Endpoint Healthcheck, clients are able to customize the service execution to meet the changing needs of their business:

Anti-Virus Validation to determine if any endpoints are open to malware and virus attacks

Microsoft Windows Patch Validation to detect outdated patches across all endpoints

Unauthorized Application Detection to determine if, and where, any blacklisted applications are running on your systems

Endpoint Vulnerability Detection to determine vulnerabilities to common applications

Microsoft Windows End of Life Detection to detect if any systems are running out of support life versions of Windows

Create and print customized inspection reports, as well as view previous inspection results in support of PCI DSS and HIPAA standards

Simple, yet Powerful

Promisec Integrity with Endpoint Healthcheck provides advanced visibility into your endpoint environment with antivirus validation, patch management validation, unauthorized application checks, endpoint vulnerability detection and end of life detection services. Inspections can be customized to meet the specific needs of your business.

Actionable Intelligence

With a few simple clicks and within a matter of moments, the cloud-based solution is able to determine what endpoints are compliant, non-compliant and which couldn't be inspected including for what reasons, according to your customized service selection. Each non-compliant endpoint can be expanded to reveal the issues found.

The Result: 100% Endpoint Integrity with Unprecedented Time to Value

For many organizations, even a basic understanding of the overall health and security posture of their endpoints seems like an impossible task. Big, cumbersome tools require the use of heavy, resource-eating agents, and their price puts them out of reach for many of the small to mid-sized enterprises. Promisec Integrity is

the first and only fully agentless, cloud-based solution to deliver a clear "Big Picture" for the health of endpoints across your enterprise. Using Integrity's built-in and ready-to-run Health Check capabilities, security and IT operations personnel gain immediate visibility across all endpoints to ensure that they are compliant with regulations and mandates such as PCI and HIPAA, and not running software that might introduce risks to the environment.
