

Endpoint Detect and Remediate for Managed Service Providers

Detect and Remediate Cyber Incidents with Promisec Endpoint Manager Managed as a Service

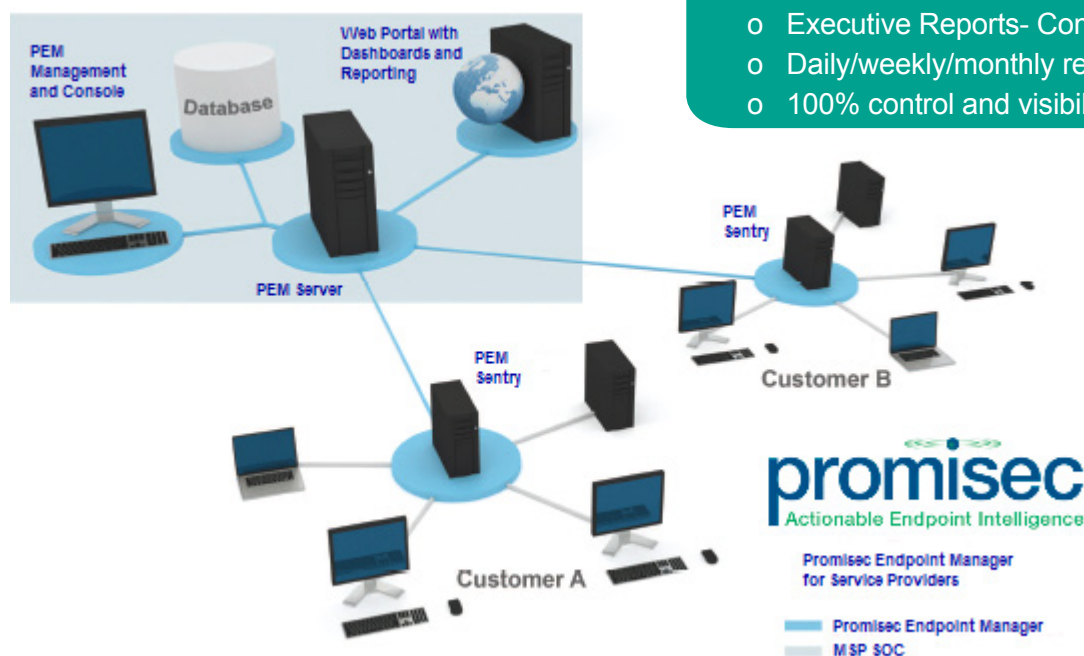

One of the main challenges MSP's face today is managing their customers' increasingly complex security & compliance challenges. Promisec provides a complete endpoint detect and remediate (agentless) platform for an MSP – we give you visibility and monitoring capabilities and the ability to remediate the problems remotely.

Reduce Complexity, Increase Control and Security for your customers

As customers demand more from MSPs inside the networks they manage, those who provide gateway-only solutions are missing out on offering additional and valuable endpoint management services customers are asking for. Promisec PEM can help you quickly take advantage of this demand with minimal investment and within the framework of your existing managed service business. PEM provides full visibility and control of endpoints and servers with virtually zero impact on your customers' business processes or network performance and eliminates the costs of additional security experts and managers.

- **Low Start-Up Costs:** Promisec MSP solutions allow you to leverage your current remote managed infrastructure so that you can have PEM up and running quickly with minimal start-up costs and easily enroll new customers to the service.
- **Zero impact on business processes:** Promisec PEM agentless platform has virtually zero impact on performance and does not require any changes to endpoint hardware, data or applications.
- **Efficient use of human and network resources:** Promisec PEM allows more value from your existing team that manages remote infrastructure because PEM delivers higher value at the remote endpoint

Promisec MSP Architecture

Solution at a glance

- **Promisec MSP platform deliveries:**
 - o Executive Reports- Compliance/Inventory/Cyber
 - o Daily/weekly/monthly reports
 - o 100% control and visibility

Come See What We See

Promisec Endpoint Manager is simple, easy to use, quick to implement, and shareable across every environment. The Promisec platform can be tailored to meet the specific needs of multiple departments within an organization covering numerous use cases. This flexibility allows for unprecedented [ROI](#).

Key Features of a Promisec Agentless Solution

- **Compliance:**
 - o Anti-virus clients
 - o Personal firewalls
 - o Third-party agents
 - o OS service packs
 - o Group policy & Custom defined policies
 - o Standards supported: HIPAA, PCI, SOX
- **Inventory:**
 - o Complete view
 - o Hardware and software
 - o “Google’ like search
- **Security Monitoring and Alerting:**
 - o Built-in Blacklist (>3000 apps)- P2P, Remote control, sharing, hacking tools etc.
 - o Whitelisting
 - o Online messages/Email Alerts/SIEM syslog
- **Cyber Threats:**
 - o Classify all file additions and changes quickly
 - o Determine File Reputation using largest threat intelligence
 - o Complete remediation including process/file removal, registry change
 - o Forensic capture of endpoint data
 - o Fully integrated to security ecosystem (malware sandboxes, network analytics, threat intelligence feeds)
